

Help us to avoid water shortages

Groundwater levels are currently low after several years of very little precipitation. The drinking water must be sufficient for food, drink and hygiene.

Please ...

- ... don't do the dishes under running water
- ... close the faucet when brushing your teeth
- ... take short showers and turn off the water as you shampoo and soap in
- ... do not bathe
- ... wash the car with a car wash that recycles the water

Every drop of water is important!
